

Nama: Fahisa Muhammad Pangestu

Tujuan: Pengumpulan Tugas Laravel Pertemuan 1

Dimana dalam tugas membuat sebuah sistem MVC sederhana untuk menampilkan data array pada Model kemudian ditampilkan dengan view.

Lakukanlah pada studi kasus tabel Genre dan Author pada dokumen Brief.

Berikan masing-masing 5 data pada Model.

Link Github: <https://github.com/fahisamuhammadpangestu-cmd/booksales-api-laravel/tree/pertemuan-2>

Membuat sebuah model author

```
<?php

namespace App\Models;

use Illuminate\Database\Eloquent\Model;

class Author extends Model
{
    ...private $authors = [
        ...['id' => 1, 'name' => 'Tere Liye', 'city' => 'Jakarta'],
        ...['id' => 2, 'name' => 'Dee Lestari', 'city' => 'Bandung'],
        ...['id' => 3, 'name' => 'Andrea Hirata', 'city' => 'Belitung'],
        ...['id' => 4, 'name' => 'Pramoedya Ananta Toer', 'city' => 'Blora'],
        ...['id' => 5, 'name' => 'Ahmad Fuadi', 'city' => 'Maninjau']
    ...];

    ...public function getAuthors() {
        ...return $this->authors;
        ...}
    }
}
```

Membuat sebuah model genres

```
<?php

namespace App\Models;

use Illuminate\Database\Eloquent\Model;

class Genre extends Model
{
    ...private $genres = [
        ...['id' => 1, 'name' => 'Fiksi'],
        ...['id' => 2, 'name' => 'Non-Fiksi'],
        ...['id' => 3, 'name' => 'Misteri'],
        ...['id' => 4, 'name' => 'Petualangan'],
        ...['id' => 5, 'name' => 'Biografi']
    ...];

    ...public function getGenres() {
        ...return $this->genres;
        ...}
    }
}
```

Membuat controler author

```
<?php

namespace App\Http\Controllers;
use App\Models\Author;
use Illuminate\Http\Request;

class AuthorController extends Controller
{
    ...public function index() {
    ...    $authorModel = new Author();
    ...    $allAuthors = $authorModel->getAuthors();
    ...    return view('authors', ['authors' => $allAuthors]);
    ...}
}
```

Membuat controler genre

```
<?php

namespace App\Http\Controllers;
use App\Models\Genre;
use Illuminate\Http\Request;

class GenreController extends Controller
{
    ...public function index() {
    ...    $genreModel = new Genre();
    ...    $allGenres = $genreModel->getGenres();
    ...    return view('genres', ['genres' => $allGenres]);
    ...}
}
```

Mengkaitkan route untuk genre dan author

```
<?php

use Illuminate\Support\Facades\Route;
use App\Http\Controllers\BookController;
use App\Http\Controllers\GenreController;
use App\Http\Controllers\AuthorController;

Route::get('/', function () {
    ...return view('welcome');
});
Route::get('/buku', [BookController::class, 'index']);
Route::get('/books', [BookController::class, 'index']);
Route::get('/genres', [GenreController::class, 'index']);
Route::get('/genres', [GenreController::class, 'index']);
Route::get('/authors', [AuthorController::class, 'index']);
```
