

Nama: Fahisa Muhammad Pangestu

Tujuan: Pengumpulan Tugas pertemuan 2 PHP

Dalam tugas ini diperintahkan untuk menginstal laravel dan menginisiasi folder booksales_api

Berikut tahapan penginstalan

A screenshot of a terminal window showing the Laravel installation process. At the top, the word 'LARAVEL' is displayed in a large, stylized, blocky font. Below it, the terminal prompts the user to choose a starter kit. The options are: [none] None, [react] React, [svelte] Svelte, [vue] Vue, and [livewire] Livewire. The user has entered 'none'. Next, the terminal asks for a testing framework preference. The options are: [0] Pest and [1] PHPUnit. The user has entered '0'. Finally, the terminal asks if the user wants to install Laravel Boost to improve AI assisted coding. The user has entered 'yes'.

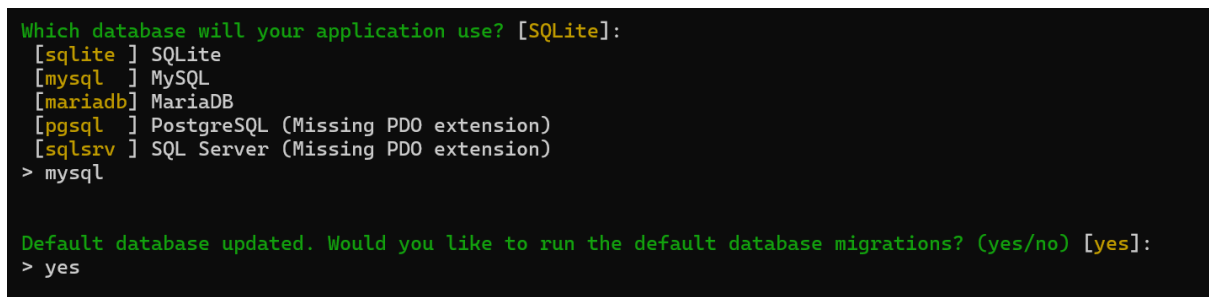

```
LARAVEL

Which starter kit would you like to install? [None]:
[none] ] None
[react] ] React
[svelte] ] Svelte
[vue] ] Vue
[livewire] ] Livewire
> none

Which testing framework do you prefer? [Pest]:
[0] ] Pest
[1] ] PHPUnit
> 0

Do you want to install Laravel Boost to improve AI assisted coding? (yes/no) [yes]:
> yes
```

Isikan sesuai yang ada seperti digambar

A screenshot of a terminal window showing the database selection step of the Laravel installation. The terminal prompts the user to choose a database. The options are: [sqlite] SQLite, [mysql] MySQL, [mariadb] MariaDB, [pgsql] PostgreSQL (Missing PDO extension), and [sqlsrv] SQL Server (Missing PDO extension). The user has entered 'mysql'. Below this, the terminal informs the user that the default database has been updated and asks if they want to run the default database migrations. The user has entered 'yes'.

```
Which database will your application use? [SQLite]:
[sqlite] ] SQLite
[mysql] ] MySQL
[mariadb] ] MariaDB
[pgsql] ] PostgreSQL (Missing PDO extension)
[sqlsrv] ] SQL Server (Missing PDO extension)
> mysql

Default database updated. Would you like to run the default database migrations? (yes/no) [yes]:
> yes
```

Selanjutnya pilih sesuai yang ada di gambar diatas

Selanjutnya jika tahap instalasi sudah selesai, buka folder yang sudah dibuat dengan vsCode ketikkan perintah di terminal “php artisan serve”

Lalu buka link nya dan di browser akan menampilkan seperti ini
